

Economical Tube bending Software - BT-PRO

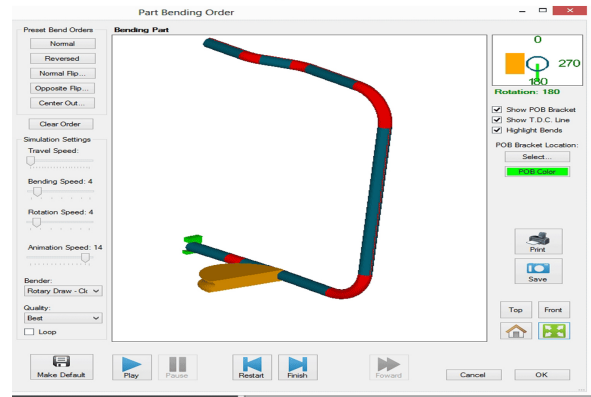

Product Images

Spring Back Calculator

The Spring Back Calculator has an area to enter the angles of spring back experienced after bending which allows the software to automatically make the necessary adjustments. The "Results" and setup sheet have an additional column which includes the spring back angles.

Bending Simulation

Simulation helps the fabricator visualize the bending process before running the part through the machine. This helps to confirm the manufacturability of the part and the bend order. (*Does NOT check for collision.)

Short Description

Additional Information

Stock Number	BA9-1002158
Accessories	Included Accessories
Model Number	BT-PRO
Prop 65	Cancer and Reproductive Harm
Warranty	1 Year
Gross Weight	1.0
